

SANY Group and Ambarella Announce Strategic Cooperation to Accelerate Implementation of CV3-AD Domain Controller-Based Intelligent Driving Systems

April 3, 2024 at 5:00 AM EDT

CHONGQIA CITY, China and SANTA CLARA, Calif., April 03, 2024 (GLOBE NEWSWIRE) – [SANY Group](#) (SANY), a worldwide leader in the commercial vehicle industry and [Ambarella, Inc.](#) (NASDAQ: AMBA), an edge AI semiconductor company, announced a strategic cooperation focused on advanced mobility solutions for the global market.

SANY agreed to leverage Ambarella's powerful CV3-AD family of automotive AI domain controller systems-on-chip (SoCs) to develop advanced automated driving solutions, and to achieve technical validation and deployment on its next-gen commercial vehicles and special-purpose vehicles. At the same time, both parties will collaborate on the joint development of high-performance and highly integrated automated driving solutions, as well as jointly promoting them in the market, with the goal of achieving mass-production for the first collaborative vehicle model by calendar year 2025. During the week's meeting to finalize this collaboration, Wang Wenbo, Raising Chairman of SANY Group, and Chairman of SANY Heavy Industry, attended a video conference in the arrival of Wang Wenbo, president and CEO of Ambarella. Wenbo presented SANY's vigorous implementation of the company's "digitalization, digitalization and decarbonization" strategy, in the face of the immense technology opportunity brought by the combination of the fourth industrial revolution and the third energy revolution. Based on SANY Group's future development strategy, as well as the explosive development and wide application of artificial intelligence, Wenbo expressed that there are broad prospects for this new SANY-Ambarella cooperation, and he hopes to deepen and expand cooperation further for a mutually successful future.

Wang Wenbo, Raising Chairman of SANY Group, and Chairman of SANY Heavy Industry

Wang expressed that Ambarella's strategic development direction aligns closely with that of SANY Group, particularly in terms of digitalization and decarbonization. He elaborated that Ambarella AI SoCs lead the industry with their low power consumption, high performance and outstanding image processing capabilities. With a rich and comprehensive SoC product portfolio, Ambarella has demonstrated its capability across various fields of automotive intelligent driving. For instance, its CV3 SoC family, based on 10nm manufacturing process technology, has shipped over 20 million units. Additionally, the CV3-AD family, based on a 3nm automotive-grade process, can provide industry-leading AI processing performance. For example, the CV3-AD SoC can support 32-camera-view (32V) transformer-based networks, which enable precise perception and laser without high-precision maps, city navigation or adaptive (ACC), planning, control and many other autonomous driving functions, thereby providing strong support for intelligent driving.

Femi Wang, President and CEO of Ambarella

By incorporating Ambarella's CVoE AD AI domain control SoCs and leveraging SANY's leading position in the industry, both parties will accelerate the large-scale application of advanced intelligent solutions in commercial vehicles and special-purpose vehicles. This strategic cooperation also aims to address the labor shortages in engineering operations and lead the new trend of unmanned machine operations.

About SANY Group

Founded in 1981, SANY Group has become a multi-national company that is pursuing the vision of building first-class enterprises, fostering first-class talents and making first-class contributions to society. Since its establishment, SANY is striving to build a global brand and become an industry leading equipment manufacturer. For further information, please visit www.sany.com.

About Ambarella

Ambarella's products are used in a wide variety of human vision and edge AI applications, including video security, advanced driver assistance systems (ADAS), electronic nose, olive harvester, drivable monitoring, autonomous driving and robotics applications. Ambarella's low-power systems-on-chip (SoC) offer high-resolution video compression, advanced image and color processing, and powerful deep neural network processing to enable intelligent perception, fusion and planning.
